

Amerikan Body Art

# Glitter Tattoos

## Application Instructions

Glitter tattoos will last longer and look nicer if you prepare the skin first by removing any body oils or lotions with rubbing alcohol.

Rubbing alcohol also removes the glitter tattoos and cleans your applicators and brushes.

99% isopropyl alcohol works best.

You can create your own free-hand designs using our specialty applicators and white taklon artist brushes or you can use our easy tattoo stencils.

You can find additional glitter tattoo supplies at [www.AmerikanBodyArt.com](http://www.AmerikanBodyArt.com)

To use our self-adhesive stencils: First remove the white backing from the stencil.

Next: Apply the stencil to the skin and peel away the clear cover sheet.

Apply a thin layer of the body glue to the open spaces of the stencil. Allow it to dry for a moment until it is clear and tacky.

Apply glitter to your design with one of our professional glitter proof bottles or with one of our glitter spoons. After covering the design with glitter, use your finger to rub it into all of the spaces really well.

Gently peel off the stencil and sweep away any excess glitter. With careful removal, stencils can be replaced on their white backing to be used again.
